USAGE & TYPES OF DISCS

Due to repeated use of land for cultivation the upper layer of soil loses its fertility. So disc blades are used for ploughing of soil, which rotates the layer of soil inside out resulting in more fertility and enhanced production.

Plain Disc

Notched Disc

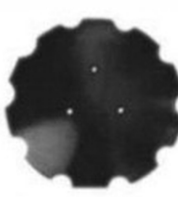

Flat Disc

Conical Disc

Coulter Disc

Centreless Disc

EARTH KING®

"FOCUS ON QUALITY"

HIGHLIGHTS

- **CrossRolling:** All the steel discs are rolled in alternated directions, so as to make finished disc more evenly in the radial perimeter and less prone to breaking under high-strain conditions.
- Maintains stringent controls on raw material purchases (whether carbon steel or boron steel) in order to manufacture products with optimal and consistent quality.
- Ensures chemical composition analysis of input material received from Steel plants with spectrometer . only then the steel is consumed for further rolling & processing upto final stage.

DISCS SIZES

Diameter	Thickness(mm)	Center Hole (mm)	Weight (kg)	Concavity(mm)
18"	3.0-3.5	25-65(Sq/Rd)	4-5	60
20"	3.5-4.0	25-65(Sq/Rd)	5-6	74
22"	3.5-4.5	29-65(Sq/Rd)	7-8	72-86
24"	4.0-5.0	29-65(Sq/Rd)	9-11	83
26"	4.5-5.5	19-29(Sq/Rd)	12-13	98

- Blades can also be manufactured as per the requirement.
- Sq → Square Rd → Round

DISC GUARANTEE

All discs are manufactured under strict quality specifications to ensure the hardness and uniformity throughout the disc. However, certain ground conditions may provoke some breaking, for such clarifications study the following table:

	Type of Failure	Cause/Reason	Guarantee
	Crack	Defective Material	100% Guarantee
	Straight Break		
	Breaking of center of Disc	Tilled over rocks or stumps, contact with rocks or other solid objects, loose bolts or Excessive disc flexing	No Guarantee
	Irregular Break		
	Irregular Break		

For your valuable demand of Harrow Disc Blades always remember "EARTH KING" the only pioneer brand manufactured in the state of "PUNJAB".
